แนวโน้มรายได้และกำไรรายเดือน (Monthly Revenue vs Profit)

Cash Cows: Watermelon and Pineapple drive the core volume, generating healthy gross margins above 41%.

Margin Squeeze on Premium SKU: Despite its premium pricing (89 THB), Mixed Berry yields a critically low gross margin of just ~15.5% due to high combined material and packaging costs (~53 THB/cup).

Actionable Recommendation: Immediately increase the retail price for Mixed Berry or renegotiate with suppliers to reduce imported fruit costs to protect overall profitability.

Budget vs. Actual Key Takeaway: "Actual Net Revenue of 22.63M missed the management budget (32.40M) by -30.2% (-9.77M THB). Only April 2026 met the target. Management's flat 2.7M/month budget failed to account for extreme weather seasonality, leading to misaligned purchasing and excessive off-peak costs."

Portfolio Performance & Pricing Analysis

sku	Sum of units_sold	Sum of net_revenue	Sum of total_cogs	% Gross Margin
Guava	101504	3,544,963.05	2,112,233.46	40.42%
MixedBerryPremium	28044	1,775,217.60	1,478,462.63	15.55%
PassionFruit	81416	3,771,924.00	2,636,799.83	30.09%
Pineapple	162168	5,680,145.66	3,306,730.98	41.78%
Watermelon	244991	7,857,290.71	4,583,016.29	41.67%
Total	618123	22,629,541.02	14,117,243.19	37.52%

Cash Cows: Watermelon and Pineapple drive the core volume, generating healthy gross margins above 41%.

Margin Squeeze on Premium SKU: Despite its premium pricing (89 THB), Mixed Berry yields a critically low gross margin of just ~15.5% due to high combined material and packaging costs (~53 THB/cup).

Actionable Recommendation: Immediately increase the retail price for Mixed Berry or renegotiate with suppliers to reduce imported fruit costs to protect overall profitability.

Promotions & Platform Profitability

Promotion Trap: Promotional rate codes such as bundles and deep discounts severely cannibalize overall profitability, driving gross margins down to unsustainable levels.

Platform Revenue Share: A clear breakdown shows channel dependency between delivery partners, highlighting differing commission impacts (e.g., GP rates).

Actionable Recommendation: Restructure discount mechanics—shift away from flat percentage-off campaigns toward basket-building bundles or cross-sells to preserve healthy unit margins.

24/7 Operational Optimization: "Hourly sales reveal that the 02:00–06:00 AM window generates under 5% of daily volume (~1.5 cups/hour/kitchen). Terminating 24/7 operations to run 06:00–02:00 (20 hours) would sacrifice minimal sales while slashing late-night utility and labor costs by an estimated 10-15% of monthly fixed overhead."

Inventory Optimization & 3-Month Outlook

Rainy Season Waste Surge: Fruit spoilage heavily negatively impacts profitability, especially during the low-demand rainy season when high stock levels mismatch slowing daily sales.

Kitchen Inefficiencies: Specific locations show significantly higher waste-to-revenue ratios, signaling a lack of standardized inventory management.

Actionable Recommendation: Shift to a Just-In-Time (JIT) ordering model utilizing a moving average of the previous week's sales to forecast daily demand. Avoid bulk purchasing during the upcoming low season to drastically reduce spoilage costs.

Kitchen Performance & Profitability

kitchen	Sum of units_sold	Sum of net_revenue	Sum of gross_profit	% Gross Margin
BKK_Ladprao	91426	3,343,379.06	1,254,892.12	37.53%
BKK_Sukhumvit	152901	5,600,967.72	2,105,991.19	37.60%
Pattaya_Beach	171439	6,270,820.42	2,347,488.04	37.44%
Pattaya_Central	202357	7,414,373.82	2,783,273.14	37.54%
Total	618123	22,629,541.02	8,491,644.49	37.52%

3-Month Outlook (Sep - Nov 2026) & Inventory Strategy:

- Demand & Inventory Forecast: Total projected demand is ~130,000 cups (Sep: 41.5K, Oct: 42.5K, Nov: 46K). Fruit procurement must be distributed: Watermelon 42%, Pineapple 23%, Guava 17%, Passion Fruit 13%, and Mixed Berry 5%.
- As-Is P&L Baseline: Without intervention, the upcoming 3 months will incur an estimated -550K THB operating loss due to off-peak rainy season demand and high waste (~80K THB/month).
- Turnaround Strategy to Stay Profitable:
 1. JIT Inventory Model: Switch to 7-day moving average daily ordering, cutting waste by 70% (saving ~165K THB over 3 months).
 2. Mixed Berry Repricing: Increase price from 89 to 99 THB (+10 THB/cup), generating +70K THB in net margin.
 3. Operating Hours Optimization: Adjust 24/7 operations to 06:00–02:00, saving ~70K THB/month in late-night fixed overhead (~210K THB savings).
- Projected Outcome: Total turnaround value of +445K to +500K THB, steering Q4 operations toward break-even and sustainable profitability.
